Why **PetzLife**?

PetzLife Oral Care is a complete, all-natural solution to your pet's oral care needs. It is **GUARANTEED** to break down plaque and tartar, work under the gum line to help heal gum tissue, and kill the bacteria that causes bad breath. So whether your pet has bad tartar build-up, has red inflamed gums, or just plain old stinky breath.... **PetzLife** is your solution!

Spray or Gel?

You may be wondering which is best for your pet.... **PetzLife** spray or gel? Both work equally as well. It really depends on your comfort level in working with your pet.

Easy to use

Just Spray or Apply Gel

**No Brushing
Required!**

Testimonials:

"PetzLife Oral Care dental products have been a great addition in my clinic. They worked on my patients that have had severe tartar and gingivitis. Now we can cure the problem while avoiding the anesthesia and the drugs!" Susan Maier D.V.M (20 yrs.)

"Safe and effective dental health products like PetzLife Oral Care, are the missing link in holistic pet care." Dr. Michael Fox, BVetMed

"PetzLife Oral Care is such a great product! My dog's teeth have NEVER been cleaner. It is so easy... let your dog lick the PetzLife off your finger... DONE. Quick, effective, healthy teeth!" Darcy D.

Directions:

Removing buildup:

Apply twice daily until plaque and tartar has dissolved. (noticeable results in 30 days) Results may vary.

As a preventative:

Apply 2-3 times per week (can be used daily)

Application:

Use recommended dosage and apply the spray or gel to into the pet's mouth, directly on the gumline if possible to speed up results.

Spray Doses:

Pet under 12 lbs.	2-3 sprays
Pet 12-35 lbs.	3-4 sprays
Pet 35-60 lbs.	4-5 sprays
Large breeds	5-6 sprays

Gel Doses:

Pet under 12 lbs.	1/4 tsp.
Pet 12-35 lbs.	1/3 tsp.
Pet 35-60 lbs.	1/2 tsp.
Large breeds	1 tsp.

FOR BEST RESULTS, WITHHOLD FOOD AND WATER FOR AT LEAST A HALF HOUR AFTER APPLICATION.

Gel Tips: Apply gel onto fingers and wipe onto the animals teeth and gums. Even wiping on the outside of your animals lips will do the trick as they will naturally want to lick it off. For cats, you may dab gel on top of their paw as they will lick it off as well.

Spray Tips: For best results, hold animals lip up and spray directly onto the gum line. Do not worry if you cannot spray gum line directly as the product will still work with the saliva as the animal licks it around.

Brushing is not necessary, but brushing in between applications speeds up the process. If your pet pulls back during the application, do not be alarmed as they are just not used to the taste.
